

Waxes and Specialties  
**COSMETICS AND PERSONAL CARE**

# Natural Waxes

Beeswax, Carnauba wax, and Candelilla wax are the most important natural waxes from a technical and commercial standpoint. Within our range of **natural waxes**, we offer solutions from **sustainable** sources and with **certifications** that guarantee their origin and effectiveness:

## Carnauba

- Vegan
- Good compatibility with oils and natural waxes
- In creams or lotions, it acts as an agent that **prevents moisture loss** in the skin
- In lip balms, it provides **shine** and increases heat **resistance** due to its high melting point
- **Structuring** agent

## Candelilla Real®

- Rheological agent that modifies the **viscosity** of emulsions
- Provides excellent **structure and shine** to lipsticks and eyeliners
- In hair creams, it allows **styling** to last longer
- **Prevents oil migration** and facilitates the release of lipsticks from molds
- Shows excellent performance for **gelling vegetable oils**
- **Exfoliating** property

## Royal BWX®

- Rheological agent
- High malleability and adhesive capacity, which allows for better **structure** in lipsticks, mascaras, etc.
- Provides **moisturizing** properties to lips and skin
- Provides water **resistance** in sunscreens
- Emollient agent that provides softness to the skin
- Increases **stability** in cosmetic emulsions

# Mineral Waxes

Mineral-origin waxes are stable and, due to their versatility, can be used in skin care formulations, producing emulsions with excellent texture and stability. In skin care products, the formation of liquid crystals within the emulsion promotes "prolonged release" hydration and also serves as a mechanism for "slow release" delivery of active ingredients.

## Paraffins

- **Emollient** agent that provides softness to the skin
- Adds structure to the final product
- Low oil content
- Rheological modifier
- Provides a **barrier against moisture**

## Microcrystalline Waxes

- High capacity for oil and fragrance **retention**
- Wide range of melting temperatures
- Aids in pigment **moisturization**
- Provides a barrier against moisture
- Provides consistency and emollience to the final product
- Rheological modifier
- Adds **structure** to the final product

## Petrolatums

- **Emollient** agent that provides softness to the skin
- **Film-forming** agent
- Rheological modifier
- Provides smooth **consistency**

• Our waxes are designed to meet the needs of customers and follow the natural trends of the cosmetic market. They comply with cosmetic regulations and can generate cost reductions in our clients' formulas.

• We have developed specialties that meet strict control methods for skin, eye, and hair care applications.

# SUSTAINABILITY

At Multiceras, we have decided to make Sustainability a principal axis of business transformation, directing efforts to contribute to the solution of global challenges. Our objective is to create shared value for all our stakeholders through the sustainable use of biodiversity and the sustainable development of communities, resulting in quality products that meet the challenges and objectives of our clients.
